

## **Enphase Introduces Enlighten 2.0 for Enhanced Solar System Monitoring & Analysis**

Enlighten 2.0 expands functionality to include mobile access for subscribers and an array building capability for solar installers

**Petaluma, Calif. – May 26, 2010** – Enphase Energy, the leader in solar microinverter systems, today introduced Enlighten™ 2.0, a new release of its popular web-based solar system monitoring and management platform. The new version offers an updated look and feel and expanded features that benefit solar system owners and installers.

Enlighten was launched in 2008, as part of the Enphase Microinverter System. Unlike traditional solar monitoring solutions which only provide system-level information, Enlighten provides real-time performance information and analytics on a per-module basis. In addition, Enlighten includes a 100% uptime guarantee for solar systems up to 10kW, through the Enphase Entrust performance guarantee.

“Enlighten has become an important sales tool for solar installers because it gives customers complete assurance of their solar system’s performance,” said Raghu Belur, VP of marketing, Enphase Energy. “Installers enjoy faster installations when using Enphase Microinverters, and Enlighten 2.0 offers powerful new array building features designed to further expedite the setup process.”

With the new array building feature, solar installers can set up Enlighten websites for newly installed solar systems in a matter of minutes, allowing new system owners to begin viewing performance information much more quickly than in the past.

Enlighten 2.0 enables mobile access from smart phones, allowing solar system owners to view clean energy production information remotely. Smart phone browsers are automatically guided to the mobile version of Enlighten.

“Enlighten is an essential source of intelligence for system owners,” added Belur. “Enlighten 2.0 increases the value of this intelligence by making it easy and convenient to view performance information from any location, at any time.”

**About Enphase**

Enphase Energy provides solar energy management systems for residential and commercial markets. The company offers a system that includes high-efficiency microinverters, communications and Web-based monitoring and analysis. The systems increase energy harvest, improve system reliability and simplify design, installation and management. Founded in 2006 and based in Northern California, the company is led by veterans from the solar and high-tech industries and backed by industry leaders. For more information about Enphase, please visit [www.enphaseenergy.com](http://www.enphaseenergy.com).
