Enphase Energy Services Surpasses One Gigawatt of Systems Serviced

Continued commitment to accelerate the expansion of energy management services

PETALUMA, Calif.--(BUSINESS WIRE)-- Enphase Energy, Inc. (NASDAQ: ENPH), a global energy technology company, announced today that its Enphase Energy Services (EES) business has surpassed one gigawatt (GW) of systems serviced. EES works with system owners, operators and installers to protect their solar investments with a scalable asset management and operations and maintenance (O&M) services offering, and is one of the largest commercial and residential service providers in the U.S.

Next Phase Solar, a division of Enphase Energy, has strengthened EES' ability to operate and maintain residential and commercial systems, as well as utility-scale PV power plants, regardless of manufacturer or brand. Enphase has also experienced strong growth in its EES service areas, extending coverage from coast to coast in the U.S. and Hawaii.

"Enphase's successful track record and commitment to being a leader in energy management services have been key contributing factors to EES' success," said Martin Rogers, vice president, global service and support at Enphase. "Our continued efforts to streamline solar PV asset management and O&M services reflect Enphase's commitment to delivering outstanding performance, value and security to system owners and our partners."

EES' approach to providing customers with proactive O&M services has enabled its customers to focus on their core business of selling, financing and installing solar systems. O&M services are no longer an afterthought for the PV industry, as performance and operational efficiency improve the financial performance of the largest to the smallest PV systems installed. With a network of nationwide coverage and more than one GW of systems served, Enphase is uniquely positioned to help the solar industry reach financial success.
