Enphase Energy Expands Product Portfolio with New Installer Tools

New Version of Enlighten, ArrayGun, Engage Coupler and more featured at Solar Power International in Booth #2515

ORLANDO, Fla.--(BUSINESS WIRE)-- [Enphase Energy, Inc.](#) (NASDAQ: ENPH) today introduced new Enphase M215-compatible installer tools that expand its [Enphase® Microinverter System](#) offering at Solar Power International 2012. The expanded product portfolio includes a new version of [Enlighten](#), an Enphase [ArrayGun](#) iOS mobile app, the Enphase [Engage Coupler](#) and the Enphase [Metering & Management Solution](#) — all aimed at equipping installers with tools they need to reduce their installation time and improve their productivity.

"We designed the new tools to help solar installers reduce their time on the roof and help drive productivity using the latest user-friendly technology," said Bill Rossi, Chief Marketing Officer of Enphase Energy. "These new tools are another example of our dedication to making our microinverter system easier for both our commercial and residential customers."

New Version of Enlighten

The latest version of [Enlighten](#) software continues to deliver comprehensive monitoring and management capabilities to solar installers, owners and operators. Enlighten users will see enhanced features designed to emphasize overall system health and uptime. Installers can increase efficiency with new fleet management resources and customized kiosk views. New display preferences will give users the level of detail needed to ensure that their Enphase system is performing as expected.

New ArrayGun Mobile App

The new [ArrayGun](#) iOS mobile app dramatically improves installation time for installers. Installers can easily build arrays, scan microinverter serial numbers and upload complete array information to Enlighten. The new app can be downloaded as part of the Enphase Installer Toolkit from the iTunes store onto an iPod, iPad or iPhone and syncs via Bluetooth to a SocketMobile CHS 7xi barcode scanner.

New Engage Coupler

The [Engage Coupler](#) is a watertight enclosure for connecting two Engage AC cables in an Enphase installation, providing an alternative to installing junction boxes within an array. The Coupler includes all parts needed for splicing and sealing and attaches easily to racking. It is also compatible with Engage Cable or #12 TC-ER Cable and supports single-phase and three-phase.

The Enphase Metering and Management Solution

The Enphase Microinverter platform extends its reach with a solution for capturing revenue grade meter accuracy of $\pm 0.2\%$ with the all-in-one, pre-configured solution. Utilizing proven technology with secure integration, the [Metering & Management Solution](#) is designed for use with residential solar leases, solar power-purchase agreements and SREC monetization.

Free Design Support and Training

Enphase is offering free training for its entire Microinverter System and new installer tools during SPI 2012 at Booth #2515. For more information visit www.enphase.com/events/spi/

About Enphase Energy, Inc.

Enphase Energy delivers microinverter technology for the solar industry that increases energy production, simplifies design and installation, improves system uptime and reliability, reduces fire safety risk and provides a platform for intelligent energy management. Our semiconductor-based microinverter system converts energy at the individual solar module level and brings a systems-based, high technology approach to solar energy generation.
