

Enphase Energy Surpasses 500,000 Units Shipped

Microinverter leader tripling capacity in 2011

Petaluma, Calif. – January 19, 2011 – [Enphase Energy](#), the global leader in solar microinverter systems, today announced that it has shipped more than 500,000 microinverters to date and plans to triple production capacity in 2011 to meet accelerating demand within residential and commercial solar projects.

“The pace at which Enphase Microinverters are gaining traction is substantially altering the makeup of today’s solar market,” said Paul Nahi, CEO of Enphase Energy. “Not only are we shipping more inverters than any other company in the world, but we’re also actively monitoring more of them through our monitoring service, [Enlighten](#). This is revolutionizing the way solar systems are being sold, installed and managed.”

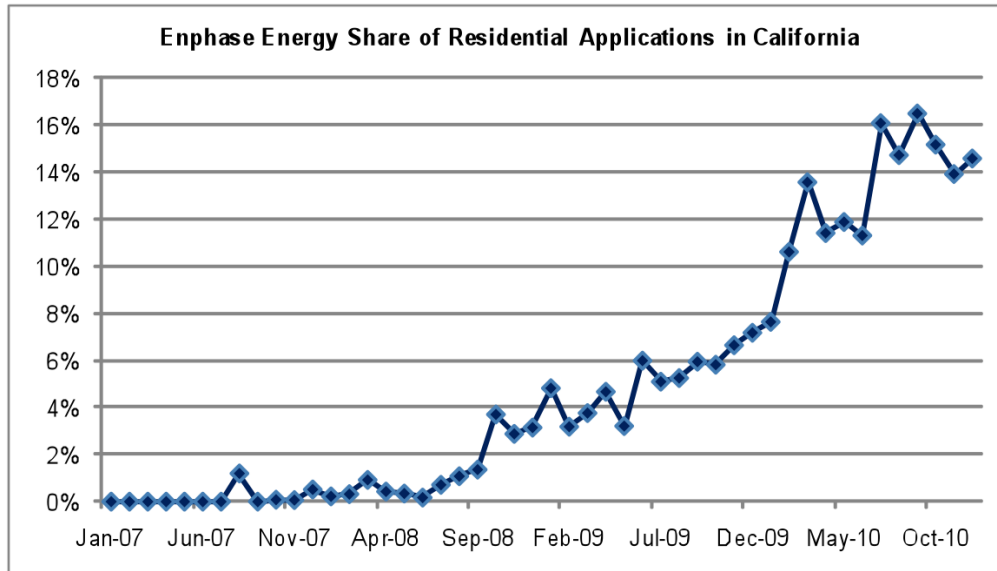

Enphase’s unique approach to solar inverters utilizes design and manufacturing approaches more commonly seen in the high tech electronics industry. For example, Enphase Microinverters are digitally controlled by a custom semiconductor chip, which also provides built-in monitoring and networking capabilities.

“By embracing similar manufacturing and supply chain practices, Enphase is in a position to benefit from the cost-reduction and high-volume manufacturing advantages also enjoyed by the world’s top electronics companies,” said Greg Sheppard, chief research officer for IHS iSuppli, a research firm tracking photovoltaic supply chain performance.

“Enphase is one of our fastest growing customers,” said EC Sykes, president of Flextronics Industrial. “Our global network of world-class manufacturing sites and complex manufacturing capabilities enable us to scale and support Enphase’s steep growth within the solar industry.”

Enphase’s growth was also recently cited in an analysis by Stifel Financial Corp., a full-service regional brokerage and investment bank, as picking up substantial market share in California solar installations.

The analysis of over 74,000 solar project applications recorded in the California Solar Initiative (CSI) database reveal Enphase reached over 13 percent market share in 2010 residential installations up to 10kW, up from 5.3 percent in 2009. Results also show growth in commercial systems ranging from 10-100kW, with Enphase capturing 9.3 percent in 2010, up from 3 percent in 2009.

About Enphase Energy

Enphase Energy provides solar energy management systems for residential and commercial markets. The company offers a system that includes high-efficiency microinverters, communications and Web-based monitoring and analysis. The systems increase energy harvest, improve system reliability and simplify design, installation and management. Founded in 2006 and based in Northern California, the company is led by veterans from the solar and high-tech industries and backed by industry leaders. For more information about Enphase, please visit www.enphaseenergy.com.
